

Flame Detectors

**QRA2...
QRA10...
QRA53...
QRA55...
QRA73...
QRA75...**

The UV flame detectors are designed for use with Siemens burner controls, for the supervision of gas or oil flames.

The QRA... and this Data Sheet are intended for use by OEMs which integrate the flame detectors in their products.

Use

The flame detectors are used for the supervision of gas flames, yellow- or blue-burning oil flames and for ignition spark proving.

Type reference	For use with burner control type	Operating mode
QRA2..., QRA10...	LGB2... / LGB4... with AGQ1... LFL... LFE1... LFE10... LMG... with AGQ2... LME21... / LME22... / LME39... with AGQ3... LMV2... / LMV3... LMV5... with AGQ1...	Intermittent
QRA53..., QRA55...	LGK16... LGI16...	Continuous
QRA73..., QRA75...	LMV5...	Continuous

Warning notes

To avoid injury to persons, damage to property or the environment, the following warning notes must be observed!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- Before making any wiring changes in the connection area, completely isolate the plant from mains supply (all-polar disconnection). Ensure that the plant cannot be inadvertently switched on again and that it is indeed dead. If not observed, there is a risk of electric shock hazard
- Ensure protection against electric shock hazard by providing adequate protection for the terminals
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state
- Halogen lamps, welding equipment, special lamps or ignition sparks may produce sufficient radiation for the detector's UV cell to ignite. X-rays and gamma radiation can also generate erroneous flame signals
- Fall or shock can adversely affect the safety functions. Such units must not be put into operation, even if they do not exhibit any damage

Mounting notes

- Ensure that the relevant national safety regulations are complied with

Installation notes

- Always run the high-voltage ignition cables separate while observing the greatest possible distance to the detector and to other cables

Electrical connection of the flame detector

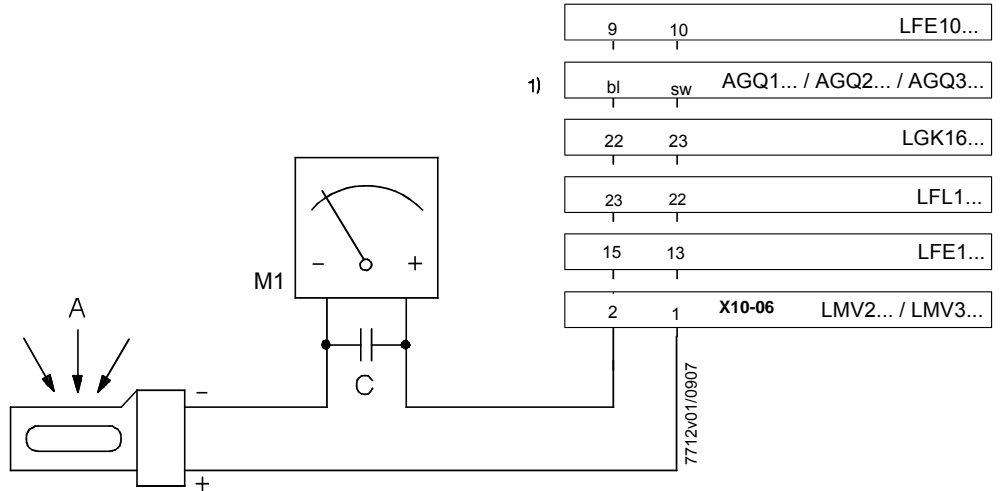

It is important to achieve practically disturbance- and loss-free signal transmission:

- Never run the detector cable together with other cables
 - Line capacitance reduces the magnitude of the flame signal
 - Use a separate cable
- Observe the permissible lengths of the detector cable (refer to «Technical data»)

Commissioning notes

- Trouble-free burner operation is ensured only when the intensity of UV radiation at the detector's location is high enough for the detector's UV cell to ignite during each half wave. The **intensity of UV radiation** at the detector's location is **checked** through **measurement of the detector current**

Measuring circuit for QRA2..., QRA10... and QRA5...of the D-series

Legend

- 1) Connection of micro-ammeter across AGQ1... / AGQ2... / AGQ3... adapter and flame detector
 A Incidence of radiation
 M Micro-ammeter (DC), internal resistance $\leq 5000 \Omega$
 C Electrolytic capacitor 100...470 μF , DC 10...25 V

Measuring circuit for QRA5... up to the C-series

The KF8832 flame detector current measuring device must not be used in continuous operation!

Minimum detector current values required:

Refer to the Data Sheet of the relevant burner control or to the Operating Instructions of the KF8832.

Measuring circuit for QRA7...

- M2 Voltmeter direct current voltage
 Measurement range 0...10V
 Internal resistance $R_i \geq 10\text{M}\Omega$

Certificates

Conformity to EEC directives
- Electromagnetic compatibility EMC (immunity)
- Low-voltage directive

2004/108/EC
2006/95/EC

ISO 9001: 2000
Cert. 00739

ISO 14001: 2004
Cert. 38233

Service notes

- Use the KF8832 service unit for short periods of time only

Disposal notes

The flame detector contains electrical and electronic components and must not be disposed of together with domestic waste.
Local and currently valid legislation must be observed.

Mechanical design

Flame detectors
QRA2... Plastic housing, metalized to prevent static charging caused by the air flow from the fan. For mounting direct on the burner. The detectors can be supplied with or without securing flange and clamp (refer to «Type summary»).

Flame detectors
QRA10... Die-cast aluminium housing with a 1 in. mounting coupling (D) and connection facility for cooling air. The housing of this detector has a bayonet fitting which allows it to be secured either directly to the 1 in. mounting coupling or to the AGG06 glass holder. The 1 in. mounting coupling can be screwed to a viewing tube or to the AGG07 ball head. The Pg cable gland can be removed and replaced, if some other detector cable shall be used.

Flame detectors
QRA5..., QRA7... The detector's UV cell is located behind a swiveling shutter at the front end of the detector tube which is flanged to the housing. A quartz-glass window protects the tube and the shutter against dirt. The detector's housing accommodates a stepper motor to drive the shutter and the electronics to control the shutter. Using the AGG16.C adapter, this flame detectors can be mounted either directly on the burner, on a viewing tube or on a combustion chamber viewing hole.

Plug AGM19 AGM19 complete with cable for the connection of QRA53... and QRA55... flame detectors.

Adapter AGG16.C AGG16.C for QRA53..., QRA55..., made of die-cast aluminium with a 1 in. mounting coupling. The 1 in. mounting coupling (D) is attached to the housing with a bayonet fitting.

Note AGG03 or AGG02 can also be fitted in the 1 in. mounting coupling (D) of the AGG16.C (or QRA10...). An adapter combination with AGG06 glass holder, mounting coupling and ball joint for QRA53..., QRA55..., QRA7... and QRA10... is possible.

Connector AGM23 Connector AGM23 with cable for the electrical connection of flame detector QRA7...

Connector AGM23U Connector AGM23 with wires for the electrical connection of flame detector QRA7... in US design

Mechanical design (cont'd)

Glass and quartz-glass lens holder AGG06

The glass and quartz-glass lens holder AGG06 serves for holding the AGG03 lens and the AGG02 heat insulation glass.

The lens is used to increase the sensitivity, and the heat insulation glass provides protection against high temperatures, thus extending the life of the UV cell.

The AGG06 also allows various combinations of lens, heat insulation glass and 1 in. mounting coupling.

When using the lens and the heat insulation glass, the AGG06 with the lens must be mounted as close as possible to the flame detector.

AGG06 has a bayonet fitting with which it is attached either to the housing of the AGG16.C or to the housing of the QRA10... and the 1 in. mounting coupling.

By undoing the bayonet fittings on both sides, the AGG06 glass holder(s) can be easily detached from the combination of QRA10... or AGG16.C and QRA53... or QRA55....

This facilitates straightforward cleaning of the glass or lens without having to remove them from the AGG06 glass holder.

The intermediate rings are used for the smooth running of the bayonet fittings, especially where – after removal of the flame detector – the hole to the combustion chamber serves as a viewing tube.

By fitting the intermediate ring to the appropriate bayonet connection, the combination can be undone where required by rotating the housing of the QRA10... or AGG16.C

Quartz-glass lens AGG03

AGG03 with spring washer and O-ring for increasing the sensitivity.

Heat insulation glass AGG02

AGG02 with spring washer and O-ring, offering the same mounting choices as AGG03. This heat insulation glass is required on applications where the temperature at the flame detector exceeds 80 °C.

Mounting coupling (D)

Using the bayonet fitting, the 1 in. mounting coupling can be attached either to the AGG06, the AGG16.C or the QRA10... flame detector.

The mounting coupling is supplied with the QRA10... or AGG16.C.

Nipple AGG05

1in. nipple AGG05 for connecting the 1in. mounting coupling (D) to the AGG07 ball head.

Ball head AGG07

AGG07 with 1in. internal thread.

Connection on AGG05 and for use with the 1in. mounting coupling and AGG06.

The AGG07 is used for mounting on a rigid surface, such as the boiler wall.

It facilitates optimum adjustment of the viewing angle.

Type summary

Condensation, formation of ice and ingress of water are not permitted!

Function

With this type of flame supervision, the UV radiation emitted by gas or oil flames is used to generate the flame signal.

The radiation detector consists of a UV-sensitive cell with 2 electrodes, which ignite when illuminated with radiation in the 190...270 nm range of the spectrum, thereby triggering a current in the flame detector circuit.

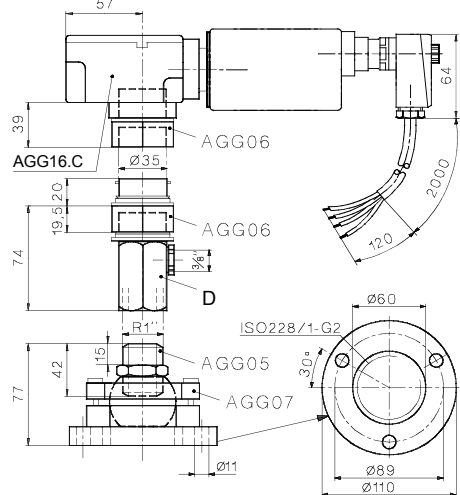

The UV cell does not respond to glowing firebrick in the combustion chamber, daylight or light from boiler room illumination.
